

# Multi-Site Security Operations

# More Buildings Shouldn't Mean More Blind Spots

---

## **Corporate security gets complicated fast.**

One HQ becomes a multi-building campus. That campus adds 10 satellite offices. Then you go international. Suddenly your SOC is responsible for dozens of facilities, and the tools you have weren't built for that. **But HiveWatch was.**

## The problem with "good enough"

You have cameras, access control, guards. Maybe a SOC. But if your team is managing multiple buildings through disconnected systems, you're not really operating a security program. You're managing a patchwork of security programs.

The result? Alert fatigue that causes real events to get missed. Guards responding to nuisance alarms instead of actual threats. Facilities teams and security teams working off different systems and different data. And when something happens in building 4 or a satellite office, you need visibility into what's going on, and the ability to route emergency response directly to where the incident is happening.

### **HiveWatch helps security leaders:**

**Cut the noise.** AI-driven analytics filter and resolve false positives before they reach your operators, funneling alarms that need a response to a human operator.

**See everything, from one screen.** Your SOC monitors alarms and alerts at HQ, every campus building, and distributed offices worldwide from a single application. No system-hopping, and no calling regional teams to find out what's happening on the ground.

**Seamlessly manage a guard force from the same screen.** Dispatch, track, and document guard activity from the same platform you use to monitor cameras and access alarms. Response times, tour completion, and incident logs are all automatically traced and auditable.

**Leverage emergency response where it's needed.** Large campus, hybrid workforce, multiple towers? HiveWatch allows operators to call 911 directly from the platform, automatically routing the call to where the incident is happening. No more precious time trying to find the right number when seconds count.

**Manage everything from one platform.** Anywhere. Centralized incident response and reporting, along with global visibility across multiple facilities without the complexity that usually comes with enterprise scale.

*HiveWatch helps security and facilities teams protect their people, their buildings, and their business — from one platform, at any size of organization.*
