

ACS Export

Brivo

Brivo (cloud-native — Brivo Access / OnAir)

1. **Scope the data:** access events and (if licensed) video and visitor logs.
2. **Confirm access path:** Brivo Access admin portal, or the Brivo REST API (developer.brivo.com — OAuth2, requires API key from your Brivo account team).
3. **Pick an export method:**
 - a. *Admin portal.* Activity → filter to last 30 days → Export CSV. Same pattern under Users, Groups, Doors, Admin Activity. Some reports cap at 10k rows — split by week if needed.
4. **Run the export:** set the 30-day window, include device/door IDs and user IDs for joins, and pull credential types so you can separate card vs. mobile vs. PIN.
5. **Normalize:** per-resource CSVs, raw UTC plus a derived local timestamp.
6. **Sanity-check:** event totals against the Activity dashboard for the same window.
