

ACS Export

ProWatch

ProWatch (Honeywell — on-prem, SQL Server backend)

1. **Scope the data:** events (transactions), alarms, hardware inventory and status (panels/PW-series boards, readers).
2. **Confirm access path:** ProWatch client (Reports module).
3. **Pick an export method:**
 - a. *Built-in Reports.* Reports → Event History / Alarm History / Cardholder / Audit Trail / Hardware → set 30-day filter → Export to Excel/CSV from the viewer.
4. **Run the export:** consistent time zone, include panel and reader IDs for joins, include event type codes plus the lookup table that decodes them.
5. **Normalize:** per-table CSVs or a single workbook with tabs.
6. **Sanity-check:** row counts against the ProWatch client's Event History for the same window.
